Subject: Law Enforcement Support Programme, Project Geiger: Request for Information related to a radiological incident

Dear Colleagues,

The mission of the INTERPOL's Radiological and Nuclear Terrorism Prevention Unit (RNTPU) is to support the development of an informed, capable, and globally connected law enforcement community that can counter and investigate nuclear and radiological crimes. In this regard, the RNTPU actively engages all 196 member countries on any criminal case involving radioactive materials. Within the RNTPU, the Project Geiger team is focused on enhancing the awareness of law enforcement of emerging radiological and nuclear crimes, trends, and threats.

The Project Geiger team and wider RNTPU have a significant amount of investigative experience which is available to assist investigators in real time, if requested. On behalf of the RNTPU, the Project Geiger team would like to offer our assistance and support in respect of any ongoing criminal investigation including support to any ongoing intelligence analysis needs.

We appreciate your assistance with providing additional information on the attached request for information.

If there are any questions or concerns regarding this matter, please contact the Project Geiger team via email at [ProjectGeiger@interpol.int](mailto:ProjectGeiger@interpol.int). We would like to take this opportunity to thank you for your continuous support to Project Geiger.

Kind Regards,

The Project Geiger Team

Subject: Law Enforcement Support Programme, Project Geiger: Request for Information related to a radiological incident.

Dear Colleagues,

The mission of the RNTPU is to support the development of an informed, capable, and globally connected law enforcement community that can counter and investigate nuclear and radiological crimes. In this regard, the RNTPU actively engages all 196 member countries on any case involving nuclear or other radioactive materials. Within the RNTPU, the Project Geiger team is focused on enhancing the awareness of law enforcement of emerging radiological and nuclear crimes, trends, and threats.

The Project Geiger team and wider RNTPU have a significant amount of investigative experience which is available to assist investigators in real time, if requested. On behalf of the RNTPU, the Project Geiger team would like to offer our assistance and support in respect of any ongoing criminal investigation including support to any ongoing intelligence analysis needs.

On behalf of the Project Geiger team within the unit, I would like to kindly request your support in obtaining details related to a radiological incident that occurred in Indonesia.

According to open-source publications from 28 May 2026<sup>1 2</sup>, the IV Naval Regional Command of the Indonesian National Armed Forces (Tentara Nasional Indonesia - TNI) prevented the smuggling of 25 containers with hundreds of tons of minerals allegedly containing radioactive elements in the waters of the Riau Islands. As stated in the article the cargo was transported by the tugboat TB Capricorn from Bangka Belitung to overseas via the Riau Islands sea route.

We would appreciate your assistance with providing additional information from the Indonesian authorities regarding the incidents. We are particularly interested in the following information:

- Could you please provide more details regarding the investigation into the case, including its current status?
- What were the findings of the inspection and examination of the detained cargo? Specifically, what minerals or materials were being transported?

---

<sup>1</sup> <https://inp.polri.go.id/artikel/tni-chief-of-staff-inspects-seized-rare-earth-minerals-worth-trillions-inbatam>

<sup>2</sup> <https://www.youtube.com/watch?v=jjT9-UF1S3o>

- What was identified as the source of radiation? Was it a contamination of the cargo, naturally occurring radioactive material (NORM), or the presence of sealed radioactive sources? Please provide details including the quantity, physical state, isotopes, activity level?
- Could you please provide any available photographs or images of the seized cargo and radioactive material.
- According to the publications, the Indonesian authorities suspected that the vessel was carrying illegal mining materials, heavy chemicals suspected of containing radioactive elements. Was this confirmed?
- Who were the sender, the carrier and the intended recipient of the cargo? Please provide details of the transportation route, including the origin, transit points, and intended destination.
- What was the intended use of the seized minerals or materials?
- Were they extracted or obtained in Indonesia, or had they been transported from other country or location?
- Who are the individuals involved in the criminal activities? What is their background/criminal records?
- Please provide nominal data of the suspects, if any. To support your investigation, we propose cross-checking the provided data against the criminal database holdings of INTERPOL.
- What was the intention and motivation of the suspects?
- Do the suspects have any links to any terrorist or organised criminal groups?

The information provided for crime analysis purposes might also be used to raise awareness among the law enforcement experts of INTERPOL member countries regarding the modus operandi of the individuals involved. Your contribution will be greatly appreciated and will allow other law enforcement agencies to take appropriate measures to successfully prevent similar incidents in their countries.

If there are any questions or concerns regarding this matter, please do not hesitate to contact Mr Archil KHVEDELIDZE, Criminal Intelligence Officer of the Radiological and Nuclear Terrorism Prevention Unit at INTERPOL, directly via e-mail at [a.khvedelidze@interpol.int](mailto:a.khvedelidze@interpol.int) or by phone at +6596259011. The Project Geiger team can also be contacted by email at [ProjectGeiger@interpol.int](mailto:ProjectGeiger@interpol.int).

We thank you for your assistance and continuous support to INTERPOL's Project Geiger.

Best Regards,  
Archil Khvedelidze
